

# **TURBO- KLEEN™**

## **A/C System FLUSH**

***Removes oil, sludge, carbon & other deposits found inside line sets of air conditioning & refrigeration systems.***

### **Chemically & Mechanically Cleans**

#### **TURBO-KLEEN™ A/C SYSTEM FLUSH**

#### **COMPLETELY CLEANS LINE SETS AT A LOWER COST**

Turbo-Kleen™ A/C System Flush gives contractors a quicker and less expensive way to completely clean residual oil and contaminants from A/C line sets when doing R-410A retrofits, refrigerant conversions and compressor change-outs.

Unique chemical cleaning agents in Turbo-Kleen™ combined with an innovative patent-pending injection system nozzle creates a turbulent solution that chemically cleans and mechanically scrubs A/C and refrigerant lines. It removes oil, sludge, carbon and other deposits from the inlet to outlet side. Turbo-Kleen™ scrubbing action stays active all the way through the line for a more complete clean.

This Turbo-Kleen™ kit includes a reusable injector nozzle and canister, plus a flushing tool, a clear plastic connecting line and one pint of chemical solution. Contractors can save money by reusing the Turbo-Kleen™ canister and only purchasing the solution in pint or gallon sizes for future jobs.

- Stays active during the entire cleaning process
- Scrubbing action cleans more completely than chemicals alone
- Low toxicity
- Cost effective, reusable system
